

**Question 1** | Correct | Mark 1.00 out of 1.00 | Flag question

Given two numbers, write a C program to swap the given numbers.

For example:

Input	Result
10 20	20 10

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,m,temp;
4     scanf("%d %d",&n,&m);
5     temp=n;
6     n=m;
7     m=temp;
8     printf("%d %d",n,m);
9 }
```

	Input	Expected	Got	
✓	10 20	20 10	20 10	✓

Passed all tests! ✓

**Correct**

Marks for this submission: 1.00/1.00.

Write a C program to find the eligibility of admission for a professional course based on the following criteria:

Marks in Maths  $\geq 65$

Marks in Physics  $\geq 55$

Marks in Chemistry  $\geq 50$

Or

Total in all three subjects  $\geq 180$

#### Sample Test Cases

##### Test Case 1

###### Input

70 60 80

###### Output

The candidate is eligible

##### Test Case 2

###### Input

50 80 80

###### Output

The candidate is eligible

##### Test Case 3

###### Input

50 60 40

###### Output

The candidate is not eligible

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int m,p,c;
4     scanf("%d %d %d",&m,&p,&c);
5     if((m>=65 && p>=55 && c>=50)|| (m+p+c>=180)){
6         printf("The candidate is eligible");
7     }
8
9     else{
10         printf("The candidate is not eligible");
11     }
12 }
13
14 }
```

Input	Expected	Got	
✓ 70 60 80	The candidate is eligible	The candidate is eligible	✓
✓ 50 80 80	The candidate is eligible	The candidate is eligible	✓

Passed all tests! ✓

**Correct**

Marks for this submission: 1.00/1.00.

### Question 3 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Malini goes to BestSave hyper market to buy grocery items. BestSave hyper market provides 10% discount on the bill amount B when ever the bill amount B is more than Rs.2000.

The bill amount B is passed as the input to the program. The program must print the final amount A payable by Malini.

Input Format:

The first line denotes the value of B.

Output Format:

The first line contains the value of the final payable amount A.

Example Input/Output 1:

Input:

1900

Output:

1900

Example Input/Output 2:

Input:

3000

Output:

2700

**Answer:** (penalty regime: 0 %)

```

1 #include<stdio.h>
2 int main(){
3     int n,m;
4     scanf("%d",&n);
5     if(n>2000){
6         m=n*0.1;
7         n=n-m;
8         printf("%d",n);
9     }
10    else{
11        printf("%d",n);
12    }
13}
14
15 }
```

	Input	Expected	Got	
✓	1900	1900	1900	✓
✓	3000	2700	2700	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

#### Question 4 Correct · Mark 1.00 out of 1.00 Flag question

Baba is very kind to beggars and every day Baba donates half of the amount he has when ever a beggar requests him. The money M left in Baba's hand is passed as the input and the number of beggars B who received the alms are passed as the input. The program must print the money Baba had in the beginning of the day.

##### Input Format:

The first line denotes the value of M.

The second line denotes the value of B.

##### Output Format:

The first line denotes the value of money with Baba in the beginning of the day.

##### Example Input/Output:

Input:

```
100
2
```

Output:

```
400
```

##### Explanation:

Baba donated to two beggars. So when he encountered second beggar he had  $100/2 = \text{Rs.}200$  and when he encountered 1st he had  $200/2 = \text{Rs.}400$ .

##### Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int m,n;
4     scanf("%d %d",&m,&n);
5     int a,t;
6     a=m*n;
7     t=a/2;
8     printf("%d",t);
9 }
10 }
```

	Input	Expected	Got	
✓	100 2	400	400	✓

Passed all tests! ✓

The CEO of company ABC Inc wanted to encourage the employees coming on time to the office. So he announced that for every consecutive day an employee comes on time in a week (starting from Monday to Saturday), he will be awarded Rs.200 more than the previous day as "Punctuality Incentive". The incentive I for the starting day (ie on Monday) is passed as the input to the program. The number of days N an employee came on time consecutively starting from Monday is also passed as the input. The program must calculate and print the "Punctuality Incentive" P of the employee.

**Input Format:**

The first line denotes the value of I.

The second line denotes the value of N.

**Output Format:**

The first line denotes the value of P.

**Example Input/Output:**

Input:

```
500
3
```

Output:

```
2100
```

Explanation:

On Monday the employee receives Rs.500, on Tuesday Rs.700, on Wednesday Rs.900

So total = Rs.2100

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,m,s,t;
4     scanf("%d %d",&n,&m);
5     for(int i=0;i<m;i++){
6         s=n+200;
7         t=t+s;
8     }
9     printf("%d",t);
10 }
```

	Input	Expected	Got	
✓	500 3	2100	2100	✓
✓	100 3	900	900	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Two numbers M and N are passed as the input. A number X is also passed as the input. The program must print the numbers divisible by X from N to M (inclusive of M and N).

**Input Format:**

The first line denotes the value of M  
 The second line denotes the value of N  
 The third line denotes the value of X

**Output Format:**

Numbers divisible by X from N to M, with each number separated by a space.

**Boundary Conditions:**

$1 \leq M \leq 9999999$   
 $M < N \leq 9999999$   
 $1 \leq X \leq 9999$

**Example Input/Output 1:**

Input:  
 2  
 40  
 7

Output:  
 35 28 21 14 7

**Example Input/Output 2:**

Input:  
 66  
 121  
 11

Output:  
 121 110 99 88 77 66

**Answer:** (penalty regime: 0 %)

```

1 #include<stdio.h>
2 int main(){
3     int m,n,x;
4     scanf("%d %d %d",&n,&m,&x);
5     if(m<=n){
6         for(int i=n;i<=m;i++){
7             if(i%x==0){
8                 printf("%d",i);
9             }
10        }
11    }else{
12        for(int i=m;i>=n;i--){
13            if(i%x==0){
14                printf("%d ",i);
15            }
16        }
17    }
18    return 0;
19 }
20 }
```

	Input	Expected	Got	
✓	2 40 7	35 28 21 14 7	35 28 21 14 7 ✓	

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

**Question 7** Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a C program to find the quotient and remainder of given integers.

For example:

Input	Result
12	4
3	0

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,m,q,rem;
4     scanf("%d %d",&n,&m);
5     q=n/m;
6     printf("%d\n",q);
7     rem=n%m;
8     printf("%d",rem);
9     return 0;
10 }
```

	Input	Expected	Got	
✓	12	4	4	✓
	3	0	0	

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

**Question 8** Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a C program to find the biggest among the given 3 integers?

For example:

Input	Result
10 20 30	30

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,m,p;
4     scanf("%d %d %d",&n,&m,&p);
5     if(n>m &&n>p){
6         printf("%d",n);
7     }
8     else if(p>n&&p>m){
9         printf("%d",p);
10    }
11    else{
12        printf("%d",m);
13    }
14 }
```

	Input	Expected	Got	
✓	10 20 30	30	30	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

**Question 9** Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a C program to find whether the given integer is odd or even?

For example:

Input	Result
12	Even
11	Odd

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n;
4     scanf("%d",&n);
5     if(n%2==0){
6         printf("Even");
7     }
8     else{
9         printf("Odd");
10    }
11 }
```

	Input	Expected	Got	
✓	12	Even	Even	✓
✓	11	Odd	Odd	✓

Passed all tests! ✓

**Correct**

Marks for this submission: 1.00/1.00.

**Question 10** | Correct Mark 1.00 out of 1.00 Flag question

Write a C program to find the factorial of given n.

For example:

Input	Result
5	120

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,t=1;
4     scanf("%d",&n);
5     for(int i=1;i<=n;i++){
6         t=t*i;
7     }
8     printf("%d",t);
9 }
```

	Input	Expected	Got	
✓	5	120	120	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 11 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a C program to find the sum first N natural numbers.

For example:

Input	Result
3	6

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,t=0;
4     scanf("%d",&n);
5     for(int i=1;i<=n;i++){
6         t=t+i;
7     }
8     printf("%d",t);
9 }
10 }
```

	Input	Expected	Got
✓	3	6	6 ✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

**Question 12** | Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a C program to find the Nth term in the fibonacci series.

For example:

Input	Result
0	0
1	1
4	3

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,a=0,b=1,fib;
4     scanf("%d",&n);
5     if(n==0){
6         printf("%d",0);
7         return 0;
8     }
9     else if(n==1){
10        printf("%d",1);
11        return 0;
12    }
13    for(int i=2;i<=n;i++){
14        fib=a+b;
15        a=b;
16        b=fib;
17    }
18    printf("%d",b);
19
20}
21 }
```

	Input	Expected	Got	
✓	0	0	0	✓
✓	1	1	1	✓
✓	4	3	3	✓

Passed all tests! ✓

**Correct**

Marks for this submission: 1.00/1.00.

Question 13 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a C program to find the power of integers.

input:

a b

output:

$a^b$  value

For example:

Input	Result
2 5	32

Answer: (penalty regime: 0 %)

```
1 #include<math.h>
2 #include<stdio.h>
3 int main(){
4     int n,m,power;
5     scanf("%d %d",&n,&m);
6     power=pow(n,m);
7     printf("%d",power);
8 }
9 }
```

	Input	Expected	Got	
✓	2 5	32	32	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 14 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a C program to find Whether the given integer is prime or not.

For example:

Input	Result
7	Prime
9	No Prime

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n;
4     int isprime=1;
5     scanf("%d",&n);
6     for(int i=2;i<=n/2;i++){
7         if(n%i==0){
8             isprime=0;
9             break;
10    }
11 }
12 if(isprime){
13     printf("Prime");
14 }
15 else{
16     printf("No Prime");
17 }
18 return 0;
19 }
```

	Input	Expected	Got	
✓	7	Prime	Prime	✓
✓	9	No Prime	No Prime	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

**Question 15** | Correct | Mark 1.00 out of 1.00 | Flag question

Write a C program to find the reverse of the given integer?

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,rev=0,rem;
4     scanf("%d",&n);
5     while(n!=0){
6         rem=n%10;
7         rev=rev*10+rem;
8         n=n/10;
9     }
10    printf("%d",rev);
11    return 0;
12 }
```

	Input	Expected	Got	
✓	123	321	321	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

## Problem 1: Finding Complexity using Counter Method

Started on Thursday, 7 August 2025, 8:07 PM

State Finished

Completed on Thursday, 7 August 2025, 8:13 PM

Time taken 5 mins 29 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

**Question 1** Correct Mark 1.00 out of 1.00 [Flag question](#)

Convert the following algorithm into a program and find its time complexity using the counter method.  
void function (int n)

```
{  
    int i= 1;  
  
    int s =1;  
  
    while(s <= n)  
    {  
        i++;  
        s += i;  
    }  
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**For example:**

**Input Result**

9 12

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>  
2 int co=0;  
3 void function(int n)  
4 {  
    int i=1;  
    co++;  
    int s=1;  
    co++;  
    co++;  
    co++;  
    while(s<=n){  
        i++;  
        co++;  
        s+=i;  
        co+=2;  
    }  
    printf("%d",co);  
}  
18 int main(){  
19     int n;  
20     scanf("%d",&n);  
21     function(n);  
22 }
```

Input	Expected	Got
✓ 9	12	12 ✓
✓ 4	9	9 ✓

Passed all tests! ✓

Correct

## Problem 2: Finding Complexity using Counter method

Started on Wednesday, 6 August 2025, 9:05 AM

State Finished

Completed on Wednesday, 6 August 2025, 9:22 AM

Time taken 17 mins 18 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 Correct Mark 1.00 out of 1.00 [Flag question](#)

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int co=0;
3 void func(int n)
4 {
5
6     co=(5*n)+2;
7     printf("%d",co);
8 }
9
10 int main(){
11
12     int n;
13     scanf("%d",&n);
14     func(n);
15 }
```

Started on Wednesday, 6 August 2025, 9:31 AM

State Finished

Completed on Saturday, 9 August 2025, 5:42 PM

Time taken 3 days 8 hours

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

### Question 1 Correct Mark 1.00 out of 1.00 [Flag question](#)

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
    for (i = 1; i <= num; ++i)
    {
        if (num % i == 0)
        {
            printf("%d ", i);
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1 #include<stdio.h>
2 int count=0;
3 void Factor(int num){
4     int i;
5     {
6         for(i=1;i<=num;++i)
7         {
8             count++;
9             count++;
10            if(num%i==0){
11                count++;
12            }
13        }
14        count++;
15        printf("%d",count);
16    }
17 }
18 int main(){
19     int n;
20     scanf("%d",&n);
21     Factor(n);
22 }
```

## Problem 4: Finding Complexity using Counter Method

Started on Saturday, 9 August 2025, 5:50 PM

State Finished

Completed on Saturday, 9 August 2025, 6:13 PM

Time taken 22 mins 52 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

**Question 1** Correct Mark 1.00 out of 1.00 [Flag question](#)

Convert the following algorithm into a program and find its time complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1 #include<stdio.h>
2 int count=0;
3 void function(int n)
4 {
5     int c=0;
6     count++;
7     for(int i=n/2;i<n;i++){
8         count++;
9         for(int j=1;j<n;j=2*j){
10             count++;
11             for(int k=1;k<n;k=k*2){
12                 count++;
13                 c++;
14                 count++;
15             }
16             count++;
17         }
18         count++;
19     }
20     count++;
21     printf("%d",count);
22 }
23 int main(){
24     int n;

## Problem 5: Finding Complexity using counter method

Started on Saturday, 9 August 2025, 6:16 PM

State Finished

Completed on Saturday, 9 August 2025, 6:27 PM

Time taken 11 mins 29 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
    print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1 #include<stdio.h>
2 int count=0;
3 void reverse(int n)
4 {
5     int rev=0,remainder;
6     count++;
7     while(n!=0)
8     {
9         count++;
10        remainder=n%10;
11        count++;
12        rev=rev*10+remainder;
13        count++;
14        n/=10;
15        count++;
16    }
17    count++;
18    count++;
19    printf("%d",count);
20 }
21 int main()
22 {
23     int n;
24     scanf("%d",&n);
25     reverse(n);
26     return 0;
27 }
```

## 1-Number of Zeros in a Given Array

**Started on** Wednesday, 17 September 2025, 8:38 AM

**State** Finished

Completed on Wednesday, 17 September 2025, 8:45 AM

**Time taken** 6 mins 28 secs

**Marks** 1.00/1.00

**Grade** 10.00 out of 10.00 (100%)

**Question 1** Correct Mark 1.00 out of 1.00  Flag question

## Problem Statement

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

#### Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers - Elements of an array

Output Format

First Line Contains Integer - Number of zeros present in the given array.

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n;
4     scanf("%d",&n);
5     int arr[n];
6     for(int i=0;i<n;i++){
7         scanf("%d",&arr[i]);
8     }
9     int count=0;
10    for(int i=0;i<n;i++){
11        if(arr[i]==0){
12            count++;
13        }
14    }
15    printf("%d",count);
16
17 }
```

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

## 2-Majority Element

Started on Wednesday, 17 September 2025, 8:45 AM

State Finished

Completed on Wednesday, 17 September 2025, 9:12 AM

Time taken 27 mins 30 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

### Question 1 Correct Mark 1.00 out of 1.00 [Flag question](#)

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than  $\lfloor n / 2 \rfloor$  times. You may assume that the majority element always exists in the array.

#### Example 1:

Input: `nums = [3,2,3]`

Output: 3

#### Example 2:

Input: `nums = [2,2,1,1,1,2,2]`

Output: 2

#### Constraints:

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-231 <= nums[i] <= 231 - 1`

#### For example:

Input	Result
3	3
3 2 3	
7	2
2 2 1 1 1 2 2	

&lt;/

## 3-Finding Floor Value

Started on Wednesday, 17 September 2025, 8:38 AM

State Finished

Completed on Wednesday, 17 September 2025, 8:55 AM

Time taken 17 mins 39 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag Question

#### Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

#### Input Format:

First Line Contains integer n - Size of array

Next n lines Contains n numbers - Elements of an array

Last Line Contains Integer x - Value for x

#### Output Format:

First Line Contains integer - Floor value for x

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int arr[100],n,x;
5     scanf("%d",&n);
6     for(int i=0;i<n;i++)
7     {
8         scanf("%d",&arr[i]);
9     }
10    scanf("%d",&x);
11    for(int i=0;i<n;i++)
12    {
13        if(x==arr[i])
14        {
15            printf("%d",arr[i-1]);
16            break;
17        }
18    }
19 }
20 }
```

	Input	Expected	Got

Correct

## 4-Two Elements sum to x

Started on Wednesday, 17 September 2025, 8:20 AM

State Finished

Completed on Wednesday, 17 September 2025, 8:38 AM

Time taken 18 mins 13 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

**Question 1** Correct Mark 1.00 out of 1.00 [Flag question](#)

#### Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

#### Input Format

First Line Contains Integer n - Size of array  
Next n lines Contains n numbers - Elements of an array  
Last Line Contains Integer x - Sum Value

#### Output Format

First Line Contains Integer - Element1  
Second Line Contains Integer - Element2 (Element 1 and Elements 2 together sums to value "x")

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n;
4     scanf("%d",&n);
5     int arr[n];
6     for(int i=0;i<n;i++){
7         scanf("%d",&arr[i]);
8     }
9     int x;
10    scanf("%d",&x);
11    int res=arr[0]+arr[n-1];
12    if(x==res){
13        printf("%d\n",arr[0]);
14        printf("%d",arr[n-1]);
15    }

## 5-Implementation of Quick Sort

Started on Wednesday, 17 September 2025, 9:13 AM

State Finished

Completed on Wednesday, 17 September 2025, 9:32 AM

Time taken 19 mins 12 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

### Question 1 Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5	12 34 67 78 98
67 34 12 98 78	

Answer:

```
1 #include<stdio.h>
2 #include<stdlib.h>
3 int main(){
4     int n;
5     scanf("%d",&n);
6     int arr[n];
7     for(int i=0;i<n;i++){
8         scanf("%d",&arr[i]);
9     }
10
11     int cmp(const void *a,const void *b){
12         return(*(int *)a-*(int *)b);
13     }
14     qsort(arr,n,sizeof(int),cmp);
15     for(int i=0;i<n;i++){
16         printf("%d ",arr[i]);
17     }

# 1-G-Coin Problem

Started on Saturday, 23 August 2025, 6:48 PM

State Finished

Completed on Saturday, 23 August 2025, 7:34 PM

Time taken 46 mins 10 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

**Question 1** Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a program to take value V and we want to make change for V Rs, and we have infinite supply of each of the denominations in Indian currency, i.e., we have infinite supply of { 1, 2, 5, 10, 20, 50, 100, 500, 1000} valued coins/notes, what is the minimum number of coins and/or notes needed to make the change.

Input Format:

Take an integer from stdin.

Output Format:

print the integer which is change of the number.

Example Input :

64

Output:

4

Explanation:

We need a 50 Rs note and a 10 Rs note and two 2 rupee coins.

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n;
4     int count=0, c=0;
5     scanf("%d",&n);
6     int arr[]={1000,500,100,50,20,10,5,2,1};
7     for(int i=0;i<9;i++){
8         count=n/arr[i];
9         c+=count;
10        n%=arr[i];
11    }

**Completed on** Saturday, 23 August 2025, 8:46 PM

**Time taken** 1 hour 12 mins

**Marks** 1.00/1.00

**Grade** 10.00 out of 10.00 (100%)

**Question 1** Correct: Mark 1.00 out of 1.00 [Flag question](#)

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child  $i$  has a greed factor  $g[i]$ , which is the minimum size of a cookie that the child will be content with; and each cookie  $j$  has a size  $s[j]$ . If  $s[j] \geq g[i]$ , we can assign the cookie  $j$  to the child  $i$ , and the child  $i$  will be content. Your goal is to maximize the number of your content children and output the maximum number.

**Example 1:**

**Input:**

```
3
1 2 3
2
1 1
```

**Output:**

```
1
```

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

**Constraints:**

```
1 <= g.length <= 3 * 10^4
0 <= s.length <= 3 * 10^4
1 <= g[i], s[j] <= 2^31 - 1
```

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n,c;
4     scanf("%d",&n);
5     int g[n];
6     for(int i=0;i<n;i++){
7         scanf("%d",&g[i]);
8     }
9     scanf("%d",&c);
10    int s[c];
11    for(int i=0;i<c;i++){
12        scanf("%d",&s[i]);
13    }
14    int i=0,j=0,count=0;
15    while(i<n && j<c){
16        if(s[i]>=g[j]){
17            count++;
18        }
19        i++;
20    }
21    j++;
22    printf("%d",count);
23    return 0;
24 }
```

# 3-G-Burger Problem

Started on Wednesday, 3 September 2025, 8:41 AM

State Finished

Completed on Wednesday, 3 September 2025, 9:06 AM

Time taken 25 mins 22 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

**Question 1** Correct Mark 1.00 out of 1.00 [Flag question](#)

A person needs to eat burgers. Each burger contains a count of calorie. After eating the burger, the person burns out  $3^i$  kilometers. If he has eaten  $i$  burgers with  $c$  calories each, then he has to run at least  $3^i * c$  kilometers to burn out all the burgers with the count of calorie in the order: [1, 3, 2]. The kilometers he needs to run are  $(3^0 * 1) + (3^1 * 2) + (3^2 * 3)$ . But this is not the minimum, so need to try out other orders of consumption and choose the minimum value. Note: He can eat burger in any order and use an efficient sorting algorithm. Apply greedy.

**Input Format**

First Line contains the number of burgers

Second line contains calories of each burger which is  $n$  space-separated integers

**Output Format**

Print: Minimum number of kilometers needed to run to burn out the calories

**Sample Input**

```
3
5 10 7
```

**Sample Output**

```
76
```

**For example:**

Test	Input	Result
Test Case 1	3 18 1 3 2	18

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 #include<math.h>
3 #include<stdlib.h>
4
5 int main(){
6     int n;
7     scanf("%d",&n);
8     int arr[n];
9     for(int i=0;i<n;i++){
10         scanf("%d",&arr[i]);
11     }
12     int cmp(const void *a,const void *b){
13         return(*(int*)b-*(int*)a);
14     }
15     qsort(arr,n,sizeof(int),cmp);
16
17     int c=0;
18     for(int i=0;i<n;i++){
19         c+=arr[i]*pow(n,i);
20     }
21     printf("%d",c);
22 }
23 }
```

# 1-DP-Playing with Numbers

Started on Wednesday, 8 October 2025, 8:16 AM

State Finished

Completed on Wednesday, 8 October 2025, 8:54 AM

Time taken 37 mins 42 secs

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 10.00 out of 10.00 ⚡ [Flag question](#)

## Playing with Numbers:

Ram and Sita are playing with numbers by giving puzzles to each other. Now it was Ram term, so he gave Sita a positive integer 'n' and two numbers 1 and 3. He asked her to find the possible ways by which the number n can be represented using 1 and 3. Write any efficient algorithm to find the possible ways.

### Example 1:

**Input:** 6

**Output:** 6

**Explanation:** There are 6 ways to represent number with 1 and 3

```
1+1+1+1+1+1  
3+3  
1+1+1+3  
1+1+3+1  
1+3+1+1  
3+1+1+1
```

### Input Format

First Line contains the number n

### Output Format

Print: The number of possible ways 'n' can be represented using 1 and 3

### Sample Input

6

### Sample Output

6

### Answer: (penalty regime: 0 %)

Ace editor not ready. Perhaps reload page?

## 2-DP-Playing with chessboard

Started on Wednesday, 8 October 2025, 8:54 AM

State Finished

Completed on Wednesday, 8 October 2025, 9:15 AM

Time taken 20 mins 25 secs

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 10.00 out of 10.00 [Flag question](#)

### Playing with Chessboard:

Ram is given with an  $n \times n$  chessboard with each cell with a monetary value. Ram stands at the (0,0), that the position of the top left white rook. He is been given a task to reach the bottom right black rook position ( $n-1, n-1$ ) constrained that he needs to reach the position by traveling the maximum monetary path under the condition that he can only travel one step right or one step down the board. Help ram to achieve it by providing an efficient DP algorithm.

Example:

Input

3  
1 2 4  
2 3 4  
8 7 1

Output:

19

### Explanation:

Totally there will be 6 paths among that the optimal is

Optimal path value:  $1+2+8+7+1=19$

### Input Format

First Line contains the integer  $n$

The next  $n$  lines contain the  $n \times n$  chessboard values

### Output Format

Print Maximum monetary value of the path

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int main() {
4     int n;
5     scanf("%d", &n);
6
7     int arr[n][n];
8     int dp[n][n];
9
10    for (int i = 0; i < n; i++) {
11        for (int j = 0; j < n; j++) {
12            scanf("%d", &arr[i][j]);
13        }
14    }
15
16    dp[0][0] = arr[0][0];
17

# 3-DP-Longest Common Subsequence

Started on Wednesday, 15 October 2025, 8:34 AM

State Finished

Completed on Wednesday, 15 October 2025, 9:03 AM

Time taken 28 mins 51 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 ⚡ Flag question

Given two strings find the length of the common longest subsequence(need not be contiguous) between the two.

Example:

s1: ggtabe

s2: tgatashb

s1            a        g        t        a        b

s2            g        x        t        x        a        y        b

The length is 4

Solving it using Dynamic Programming

For example:

Input	Result
aab	2
azb	

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 #include <string.h>
3 #define MAX 100
4 int max(int a, int b)
5 {
6     return (a > b) ? a : b;
7 }
8 int LCS(char *X, char *Y) {
9     int m = strlen(X);
10    int n = strlen(Y);
11    int L[MAX][MAX];
12    int i, j;
13    for (i = 0; i <= m; i++) {
14        for (j = 0; j <= n; j++) {
15            if (i == 0 || j == 0)
16                L[i][j] = 0;
17            else if (X[i - 1] == Y[j - 1])
18                L[i][j] = L[i - 1][j - 1] + 1;
19            else
20                L[i][j] = max(L[i - 1][j], L[i][j - 1]);
21        }
22    }
23    return L[m][n];
24 }
25 int main() {
26     char X[MAX], Y[MAX];
27     scanf("%s", X);
28     scanf("%s", Y);
29     int length = LCS(X, Y);
30     printf("%d\n", length);
31
32
33
34 }
```

	Input	Expected	Got

# 4-DP-Longest non-decreasing Subsequence

Started on	Wednesday, 22 October 2025, 7:31 PM
State	Finished
Completed on	Wednesday, 22 October 2025, 7:41 PM
Time taken	10 mins 10 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

## Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Problem statement:

Find the length of the Longest Non-decreasing Subsequence in a given Sequence.

Eg:

Input:9

Sequence:[-1,3,4,5,2,2,2,2,3]

the subsequence is [-1,2,2,2,2,3]

Output:6

**Answer:** (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int ub(int a[], int len, int key) {
4     int l = 0, h = len;
5     while (l < h) {
6         int m = l + (h - 1) / 2;
7         if (a[m] <= key)
8             l = m + 1;
9         else
10            h = m;
11    }
12    return l;
13 }
14
15 int lnds(int a[], int n) {
16     if (n == 0) return 0;
17     int t[n], len = 0;
18     for (int i = 0; i < n; ++i) {
19         int p = ub(t, len, a[i]);
20         t[p] = a[i];
21         if (p == len) len++;
22     }
23     return len;
24 }
25
26 int main() {
27     int n = 9;
28     int a[] = { -1, 3, 4, 5, 2, 2, 2, 2, 3 };
29     printf("%d\n", lnds(a, n));
30     return 0;
31 }
32

```

	Input	Expected	Got	
✓	9 -1 3 4 5 2 2 2 2 3	6	6	✓

**Question 1** | Correct Mark 1.00 out of 1.00 [Flag question](#)

Find the intersection of two sorted arrays.

OR in other words,

Given 2 sorted arrays, find all the elements which occur in both the arrays.

Input Format

- The first line contains T, the number of test cases. Following T lines contain:
  - Line 1 contains N1, followed by N1 integers of the first array
  - Line 2 contains N2, followed by N2 integers of the second array

Output Format

The intersection of the arrays in a single line

Example

Input:

1

3 10 17 57

6 2 7 10 15 57 246

Output:

10 57

Input:

1

6 1 2 3 4 5 6

2 1 6

Output:

1 6

For example:

Input	Result
1	10 57
3 10 17 57	
6	
2 7 10 15 57 246	

**Answer:** (penalty regime: 0 %)

2 1 6

Output:

1 6

For example:

Input	Result
1	10 57
3 10 17 57	
6	
2 7 10 15 57 246	

**Answer:** (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int main() {
4     int T;
5     scanf("%d", &T);
6
7     while (T--) {
8         int N1;
9         scanf("%d", &N1);
10        int arr1[N1];
11        for (int i = 0; i < N1; i++) {
12            scanf("%d", &arr1[i]);
13        }
14
15        int N2;
16        scanf("%d", &N2);
17        int arr2[N2];
18        for (int i = 0; i < N2; i++) {
19            scanf("%d", &arr2[i]);
20        }
21
22        int i = 0, j = 0;
23        int first = 1; // to avoid leading space
24        while (i < N1 && j < N2) {
25            if (arr1[i] == arr2[j]) {
26                if (!first) printf(" ");
27                printf("%d", arr1[i]);
28                first = 0;
29                i++;
30                j++;
31            } else if (arr1[i] < arr2[j]) {
32                i++;
33            } else {
34                j++;
35            }
36        }
37        printf("\n");
38    }
39
40    return 0;
41 }
```

# 5-Pair with Difference-O(n^2)Time Complexity,O(1) Space Complexity

**Started on** Wednesday, 8 October 2025, 3:25 PM

**State** Finished

**Completed on** Wednesday, 8 October 2025, 3:26 PM

**Time taken** 39 secs

**Marks** 1.00/1.00

**Grade** 4.00 out of 4.00 (100%)

## Question 1 | Correct Mark 1.00 out of 1.00 Flag question

Given an array A of sorted integers and another non negative integer k, find if there exists 2 indices i and j such that  $A[j] - A[i] = k$ ,  $i \neq j$ .

Input Format:

First Line n - Number of elements in an array

Next n Lines - N elements in the array

k - Non - Negative Integer

Output Format:

1 - If pair exists

0 - If no pair exists

Explanation for the given Sample Testcase:

YES as  $5 - 1 = 4$

So Return 1.

For example:

Input	Result
3	1
1 3 5	
4	

**Answer:** (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int main() {
4     int n;
5     scanf("%d", &n);
6     int A[n];
7     for(int i = 0; i < n; i++) {
8         scanf("%d", &A[i]);
9     }
10
11    int k;
12    scanf("%d", &k);
13
14    int i = 0, j = 1;
15    int found = 0;
16
17    while(j < n && i < n) {
18        if (i != j) {
19            int diff = A[j] - A[i];
20            if(diff == k) {
21                found = 1;
22                break;
23            }
24            else if(diff < k) {
25                j++;
26            }
27            else {
28                i++;
29                // Ensure i != j
30                if(i == j) j++;
31            }
32        } else {
33            j++;
34        }
35    }
36
37    printf("%d\n", found);
38
39    return 0;
40}
41
```
